

Miriam Udler & Melina Claussnitzer

New perspectives on diabetes: the many subtypes of type 2

Patients' experiences have long told us that not all type 2 diabetes is the same. Genetics is now starting to help doctors and scientists grasp why that is, and what it might mean for patients. In this Broad Discovery Series event, physician-geneticist Miriam Udler and computational and cellular biologist Melina Claussnitzer will discuss what genetics is teaching us about the subtypes of type 2 diabetes, and how researchers can use that understanding as a springboard for learning how this disease really works — and what to do about it.

This lecture is presented in memory of Eliana Hechter and is supported by the Eliana Hechter Memorial Fund.

Thursday, November 9 | 6:00 – 7:00 pm
Richard N. Merkin Building Auditorium

Reception to follow
